JDoodle

Online Python 3 IDE

```python
n = (int)(input("Enter a number:"))
s = n
b = len(str(n))
sum1 = 0
while n != 0:
    r = n % 10
    sum1 = sum1+(r**b)
    n = n//10
if s == sum1:
    print("The given number", s, "is armstrong number")
else:
    print("The given number", s, "is not armstrong number")
```

Execute Mode, Version, Inputs & Arguments

CommandLine Arguments

Stdin Inputs

665

Result

CPU Time: 0.01 sec(s), Memory: 7904 kilobyte(s) **executed in 0.51 sec(s)**

```
Enter a number:The given number 665 is not armstrong number
```

Note: Please check our documentation, or Youtube channel. for more details
